SUBJECT INDEX

A

AFS Committee Reports 8-12, 17-18, 19-34, 35-48, 49-62, 123-142, 203-208, 208-216
AFS Education Division 2
Accounting, Foundry 395-408
Additives, Sand
  Casting finish as affected by 306-312
  effect on physical properties 644-645
Agglomerating processes, Principles of 466-471
Air pollution
  control 185-186
  legislation 181-190
  problems 181-190
Aircraft, Casting for 703-709
Aircraft industry, Use of castings in 425-433
Airframe design, Castings in 425-433
Alloy, magnesium sand casting, Foundry characteristics and properties of 596-606
Alloy castings, Meaning of cast test bar in evaluation of aluminum and magnesium 223-232
Alloys,
  copper-base, Short-time elevated temperature properties of 267-270
  feeding range of 419-424
  titanium-silicon, Mechanical properties of 662-668
Aluminum
  alloy, Influence of vibration and fluidity and filling during investment casting of 683-686
  alloy castings, Mechanical properties of 745-751
  alloy premium strength casting, Case study of 703-709
  alloy sand castings, Application of insulated risers to 553-561
  alloy specification castings 562-568
  alloys, Hydrogen in 607-614
  as an additive for iron 514
  founding, Quantitative evaluation and importance of hydrogen in 607-614
  and Magnesium castings, Meaning of cast test bar in evaluation of 223-232
  molten, Gas measurement in 301-305
  propellers, Precision casting 200-202
Anneability of malleable cast irons 19-24, 31-34
Annealing of austenitic nickel ductile iron 641
Annealing of blackheart malleable iron, Effects of trace amounts of tin, lead, and antimony on 457-465
Antimony, tin, and lead, effects of trace amounts on annealing of blackheart malleable iron 457-465
Application of
  carbon dioxide process in the foundry 488-492
  chills for neutralization of rib and boss hot spots on plates 295-300
  indirect chills 291-292
  insufficient chills 327-329
  insulated risers to production of aluminum alloy sand castings 553-561
  refractories in the foundry 195-198
Austenitic ductile irons, Nickel 638-641
Austenitizing of ductile cast iron 116-119
Automation 5

B

Baking cores 493-502
Bentonite 71-75, 99, 104-108, 575-576
  effect on casting finish 307-312
  influence on molding sand 17- 18
Binder, core sand, New foundry 472-475
Binders 99, 103-108, 469
  costs of handling 583
  refractory 71
  for molding sand 17-18
Blackheart malleable iron, Effects of trace amounts of tin, lead, and antimony on annealing of 457-565
Blow-by, Sealing metal coreboxes against 325-326
Bonding agents (see Binders)
Bore cracks (see also Defects) 54
Bosses, effect on shrinkage 295-300
Brass, dimensions of, castings 147-151
Brass, Surface roughness measurements of 143, 146-154
Brass and bronze castings, Vapor holes in 217-222
Brick, Refractory, for foundry use 195-198
Brick linings, Refractory 170-176
Brinell hardness
  of cast iron 536
  of gray irons 262
  of magnesium alloy castings 600-601
Bronze,
  G, Feeding range of 419-424
  gun metal, Improvement of pressure tightness and tensile properties by vacuum degassing 345-354
Bronze and brass castings, Vapor holes in 217-222
Bronze propellors, Precision casting 200-202
Bubble control in poured investment plasters 689-692
Buckles (see also Defects) 56

C

Calcium, as a desulphurizing agent 511-514
Calcium carbide 542, 546-552
  injection process 512-523
  desulphurization by the injection process 524-532
Calcium silicon as an iron additive 514
Capillary forces 468
Carbides, Effect of, on strength of austenitic nickel ductile irons 640
Carbon
  content of cast irons, Increasing by ladle injection.. 533-540
  determination of nodular iron 635-636
  dioxide process, application in the foundry..... 488-492
  effect on gray cast iron shrinkage 12
  effect on hardenability of spherulitic irons 119
Case study of a premium-strength casting of 220-T4 aluminum alloy 703-709
Cast iron,
  carbon content, increasing by ladle injection 533-540
  dimensions of shell molded castings of 147-148, 150-151
  gray, Oxygen content of 177-180
  High strength, by injection methods 541-552
  liquid, Dissolved gas in 109-115
  Fluidization-injection process for desulphurizing and upgrading 511-523
  Surface roughness measurements of 143-153
Cast metals, Dimensional tolerances and surface structure in various shell 143-156
Cast steel, High temperature impact properties of 480-487
Cast test bars 223-232
Casting
  defects 451-456
  design, Experimental stress analysis as a tool..... 732-734
  finish as affected by sand additives 306-312
  quality, Improving through nondestructive testing .. 446-450
Castings,
  aluminum alloy 562-568
  aluminum alloy, Mechanical properties of 745-751
  feeding of 503-510
  in airframe design 425-433
  steel, pressure tight, Manufacture of 693-702
  steel, ruptures in, Metallographic study of 615-631
  Steel, their engineering advantages in weldments... 569-574
  Steel, use by Southern Pacific 650-656
  Use of cobalt 60 for inspection of 728-729
  What design engineers look for in 282-286
Cereal, effect on casting finish 307-312
Cerium, Residual, in iron 547
Chemical analysis of
  alloys 420
  aluminum and magnesium alloys 224

SUBJECT INDEX

Bronze and brass castings, Vapor holes in 217-222
Bronze propellors, Precision casting 200-202
Bubble control in poured investment plasters 689-692
Buckles (see also Defects) 56

C

Calcium, as a desulphurizing agent 511-514
Calcium carbide 542, 546-552
  injection process 512-523
  desulphurization by the injection process 524-532
Calcium silicon as an iron additive 514
Capillary forces 468
Carbides, Effect of, on strength of austenitic nickel ductile irons 640
Carbon
  content of cast irons, Increasing by ladle injection.. 533-540
  determination of nodular iron 635-636
  dioxide process, application in the foundry..... 488-492
  effect on gray cast iron shrinkage 12
  effect on hardenability of spherulitic irons 119
Case study of a premium-strength casting of 220-T4 aluminum alloy 703-709
Cast iron,
  carbon content, increasing by ladle injection 533-540
  dimensions of shell molded castings of 147-148, 150-151
  gray, Oxygen content of 177-180
  High strength, by injection methods 541-552
  liquid, Dissolved gas in 109-115
  Fluidization-injection process for desulphurizing and upgrading 511-523
  Surface roughness measurements of 143-153
Cast metals, Dimensional tolerances and surface structure in various shell 143-156
Cast steel, High temperature impact properties of 480-487
Cast test bars 223-232
Casting
  defects 451-456
  design, Experimental stress analysis as a tool..... 732-734
  finish as affected by sand additives 306-312
  quality, Improving through nondestructive testing .. 446-450
Castings,
  aluminum alloy 562-568
  aluminum alloy, Mechanical properties of 745-751
  feeding of 503-510
  in airframe design 425-433
  steel, pressure tight, Manufacture of 693-702
  steel, ruptures in, Metallographic study of 615-631
  Steel, their engineering advantages in weldments... 569-574
  Steel, use by Southern Pacific 650-656
  Use of cobalt 60 for inspection of 728-729
  What design engineers look for in 282-286
Cereal, effect on casting finish 307-312
Cerium, Residual, in iron 547
Chemical analysis of
  alloys 420
  aluminum and magnesium alloys 224

Chemical Analysis of (cont.)
austenitic nickel ductile irons 638
copper-base alloys 267
ductile cast iron 166
gray irons 262
Chemical composition of malleable iron 20, 332-333
Chemistry, effect on hot tearing of steel 203-208, 210
Chilling characteristics of mold material 54
Chills
for neutralization of rib and boss hot spots on plates, Application of 295-300
indirect 291-292
insufficient, Application of 327-329
range of effectiveness 13-16
Clay 84-87
binders 99, 103-104, 107-108
fines, and water relationships for green strength in molding sands 575-581
plastic refractory linings 170-176
-sand mixtures 576-579
Clean steel castings, Some factors in production of..... 687-688
Cleaning room labor reduction 687-688
Coal, for melting malleable iron 334-335
Cobalt 60, use for castings inspection 728-729
Cobalt-base, heat resistant alloy,
Dimensions of castings of 147-151
surface roughness measurements of 143, 146-152
Coke,
effect on casting finish 307-312
handling 585-586
Compaction, Sand 76-98
Company objectives and policies 391
Compression, Green, effect on scabbing tendency 138-139
Compressive strength, Sand 78-98, 383
Converter linings, Monolithic 71-75
Cooling cracks of steel castings 621-624
Cooling rate
of magnesium alloys 158
of malleable iron, effects on tensile properties 24
Copper-aluminum, Feeding range 419-424
Copper-base alloys, Short-time elevated temperature properties of 267-270
Core
baking, Reactions during 493-502
boxes 478
boxes, metal, Sealing against blow-by 325-326
hardness, effect on hot tearing 209-210
making materials, Influence on hot tears 203-208
oil, Cost of handling 583-584
room practice pitfalls 373-376
sand binder, New foundry 472-475
Cores 99, 373-376
baked 473-475
by carbon dioxide process 488-492
Plaster, made in rubber-lined boxes 442-445
Corrosion resistance of austenitic nickel ductile irons... 640
Cost
control, Foundry 395-408
estimating 317-318, 324
of carbon dioxide process 491-492
reduction program, Malleable furnace refractory .. 657-661
Refractory, in malleable melting 589-595
Costs,
raw material 582-586
refractory linings 175-176
—their effect on profit and loss 363-366
Cracks, bore (see also Defects) 54
Creep strength of magnesium alloy castings..... 602-605
Critical analysis of the cylindrical standard test specimen for foundry sands 76-98
Croning process (see Shell Molding)
Cupola design, Study of 741-744
Cupolas, foundry, Emission rates from 741-744
Current status of test patterns for evaluation of sand mixtures 49-62
Cutting temperature of gray irons, Relation between tool life and 261-266
Cylindrical test specimens, Critical analysis of, for foundry sands 76-98

D

David Taylor Model Basin 199
Defects 49-62
Casting 451-456
casting, Nondestructive tests for 726-727
gas 109-115
in brass and bronze castings 217-222
in steel castings 203-208, 208-216, 480-487, 615-631
Radiographic testing for 736-740
Scabbing 123-142
Degassing, aluminum 607-614
Degassing, vacuum, Improvement of pressure tightness and tensile properties of gun metal bronze by.... 345-354
Density,
effect on scabbing tendency 138-139
in industrial radiography, Practical methods for attaining constant 669-674
relationships, Strength-, sand 383-388
Sand 78-88, 90-98
Design
airframe, Castings in 425-433
casting, Experimental stress analysis as a tool for.... 732-734
engineers, What the, look for in castings 282-286
of aluminum alloy castings 745-746
of castings 282-286
of premium-strength alloy casting 704-705
of steel castings 571
Desulfurization, calcium carbide, by injection process .. 524-532
Desulfurizing, Soda ash, Forehearth refractories for 170-176
Desulfurizing cast iron, Fluidization-Injection process for 511-523
Development of a bottom-pour ladle practice 336-339
Developments in the light castings industry including the new die pressing process 63-70
Dextrose binders 472-475
Diaform molding (see Diaphragm molding)
Diaphragm molding 191, 193
Die pressing process 68-70
Dimensional tolerances and surface structure in various shell cast metals 143-156
Dissolved gas in liquid cast iron 109-115
Ductile cast iron,
Hardenability of 116-122
Risering of 720-725
Surface roughness measurements of.. 143, 146, 150-151, 153
Theory of nodular graphite formation in 163-169
Ductile iron, Dimensions of, castings 147-148, 150-151
Ductile iron, Nickel austenitic 638-641
Ductility, Effect of phosphorus on 519
Dust control, Foundry 64

E

Economics of premium castings 708-709
Education,
apprenticeship 4
correspondence courses 4
engineering 3
and future foundrymen 1
Effects of
molybdenum on stability and high temperature properties of pearlitic malleable iron 251-260
some melting variables on properties of malleable iron 19-34
trace amounts of tin, lead, and antimony on annealing of blackheart malleable iron 457-465
Elevated temperature properties of three copper-base casting alloys 267-270
Embrittlement, toughening, and subcritical thermal treatment of malleable iron 675-682
Emission rates from foundry cupola, Study of cupola design and operating factors that influence 741-744
Enamel blistering 66-67
Engineering advantages of steel castings in weldments.. 569-574
Engineering methods in practical sand problems: strength-density relationships 383-388
Examination of hot tears in steel castings, Metallurgical 208-216
Executive functions 389-391
Exhaust fan performance, Effect of inlet and outlet connections upon 409-412

Exothermic riser sleeves 558-561
Experimental foundry, General Motors 434-441
Experimental stress analysis, as a casting design tool ... 732-734

F

Fan performance, Effect of inlet and outlet connections upon 409-412
Fatigue failures of steel castings 618-619
Feeding
distance for ductile cast iron 720, 723-724
of castings 503-510
range in shell molds 419-424
Ferritic nodular iron 542-545, 549-552
Filling of aluminum alloy, Influence of vibration during investment casting on 683-686
Fines for green strength in molding sands, clay, and water relationships 575-581
Finish, Casting, as affected by sand additives 306-312
Firebrick 657-661
Fireclay, compressive strength 576-577
Fireclay brick, for foundry use 195-198
Flask equipment in high pressure molding 192-194
Fluidity of aluminum alloy, Influence of vibration during investment casting on 683-686
Fluidity of malleable iron 30
Fluidization — injection process for desulphurizing and upgrading cast iron 511-523
Forehearth refractories for soda ash desulphurizing 170-176
Foundries 5
Foundry,
Application of refractories in 195-198
characteristics and properties of magnesium sand casting alloy HZ32XA 596-606
cupolas, Emission rates from 741-744
Educational Foundation, Function of 3
experimental, General Motors 434-441
industry, Possible effects of air pollution on 181-190
industry, Production standards and their place in .. 317-324
men, Education and future 1
paperwork, Improving 413-418
sands, A critical analysis of the cylindrical standard test specimen for foundry sands 76-98
Fractures in castings 615-631
Fuel for melting malleable iron 334-335
Furnace
insulation 589-595
lining 71-75
refractory cost reduction program, Malleable..... 657-661
type, effect on gas in cast iron 113

G

Galvanizing embrittlement 675-676
Gas
dissolved in liquid cast iron 109-115
content of cast iron 177-180, 530
in bronze 345-354
measurement in molten aluminum 301-305
sampling 741-744
Gating
and risering, aluminum and magnesium alloys 224-225
bibliography 47-48
design 42-45
practice 127
Vertical 35-48
General Motors experimental foundry 434-441
Glues, Synthetic, for patterns 718-719
Graphite,
nodular (see Nodular graphite)
permanent molds, Pressure pouring and, used in production of steel car wheels 367-372
structure of 163-166
structure, Gray cast iron 10-11
structures, Effect on cast iron properties..... 544-548
Graphitization of pearlitic malleable iron 251-260
Gray cast iron, Oxygen content of, increase with time .. 177-180
Gray iron
castings, Risering 8-12
Desulfurizing 170-176
Desulfurizing and upgrading 511-523
Dimensions of castings of 147-151
Feeding range of 419-424
Machinability testing of 261-266
patterns 476-479
Surface roughness measurements of 143-154
Green-sand-cast magnesium alloy test bars, Tensile property evaluation of shell-mold-cast versus 157-162
Green strength in molding sands 575-581
Gun metal pressure castings, Microporosity in 233-243
Gun metal bronze, Improvement of pressure tightness and tensile properties by vacuum degassing 345-354
Gypsum cement molds for plastic patterns 377-382
Gypsum plaster riser sleeves 554-557

H

Hardness of
ductile cast iron 116-122
malleable iron 244-250
pearlitic malleable irons 254-255, 258-259
titanium-silicon alloys 667
Health, effect of air pollution on 184-185
Heat
checking of steel castings 620
treatment of steel castings 699-701
treatment
of austenitic nickel ductile iron 641
of copper-base alloys 267
mechanical properties and machinability of pearlitic malleable iron, Interrelation of 244-250
High
alumina brick 196-197
strength cast irons made by injection methods 541-552
temperature
impact properties of cast steel 480-487
properties of austenitic nickel ductile irons 640
properties of pearlitic malleable iron, Effects of molybdenum on 251-260
properties of sand 51
History of foundry industry 63-64
Hot
deformation and mold temperature, Relation between 131-135
spots, Chills for neutralization of 295-300
tear defect (see also Defects) 57
tearing,
Influence of molding materials on 99-108
of malleable iron 30-31
of steel 481-487
tears,
Influence of core making materials on 203-208
in steel castings, Metallurgical examination of .. 208-216
of steel castings 624-628
Hoyt, Charles Edgar, Memorial Lecture. Education and Future Foundrymen 1-7
Humidity, effect on cores 496-499
Hydrogen, in aluminum founding, Quantitative evaluation and importance of 607-614

I

Impact properties of cast steel, High temperature 480-487
Impact properties of titanium-silicon alloys 665-667
Improvement of pressure tightness and tensile properties of gun metal bronze by vacuum degassing .. 345-354
Improving
casting quality through nondestructive testing 446-450
foundry paperwork 413-418
refractory cost in malleable melting 589-595
Inclusions in steel castings 212-216
Increased foundry profits through nondestructive testing 730-731
Increasing carbon content of cast irons by ladle injection 533-540
Index of quality for malleable iron 26-29
Industrial radiography, Practical methods for attaining constant sensitivity and density in 669-674
Influence of
coremaking materials on hot tears 203-208
molding materials on the incidence of hot tearing.. 99-108
vibration on fluidity and filling during investment casting of an aluminum alloy 683-686

Injection
materials for upgrading gray iron castings 517
methods, High strength cast irons produced by 541-552
process for desulfurizing and upgrading cast iron.. 511-523
of calcium carbide desulfurizing 524-532
Inlet connections, effect upon fan performance 409-412
Insulated risers, Application to production of aluminum alloy sand castings 553-561
Interrelation of heat treatment, Mechanical properties and machinability of pearlitic malleable iron .. 244-250
Investigation of precision casting of experimental propellers 199-202
Investment casting
of aluminum alloy, Influence of vibration on fluidity and filling during 683-686
of propellers 199-202
Investment plasters, poured, Surface and internal bubble control in 689-692
Iron,
cast, liquid, Dissolved gas in 109-115
desulfurization 511-523
gray, Machinability testing of 261-266
gray cast, Oxygen content increases with time 177-180
nodular, Risering of 632-637
It is not all sand 451-456

J

Jet engine castings 554-558

K

Knockout properties, Sand 53-54
